

**GOVERNMENT OF PUDUCHERRY
DIRECTORATE OF INFORMATION TECHNOLOGY**

No.2/DIT/D2/2007

Puducherry, dated 02/07/2007

CIRCULAR

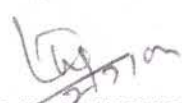

The Government of Puducherry has initiated action towards the standardization of basic data which will ensure the manageability, portability and interoperability of systems across the departments. The data pertaining to all the departments of this U.T. must be available in the proposed State Data Centre (SDC) initiated by the Directorate of Information Technology, Puducherry to deliver various services to the General public through intranet/internet. The required data for these services must be on a uniform platform.

Considering the above fact, it has been decided that the technology platform for implementing e-Governance projects in the U.T of Puducherry would be **"Operating System for Server is Open source-Linux, Middleware- J2EE Platform with compatible development tools and RDBMS - Oracle"**

The setting up of State Data Centre has been initiated by the Directorate of Information Technology, with the funding support of Ministry of Communication and Information Technology(MCIT), Government of India which will pave a way to share a single Database platform. However, in the meantime the data pertaining to every department to be stored in the Department's local server, under Oracle platform would not be cost effective. Therefore, the implementing departments are advised to get technical clearance from the Directorate of Information Technology along with Detailed Project Report (DPR) with regards to database platform which will be considered on case to case basis and to suggest suitable alternative technology platform uniformly. All departments are also advised to minimise the purchase of servers, as the government of Puducherry has already taken up the State Data Centre project for implementation.

Therefore, all Heads of Departments are hereby directed to adhere the above suggestions in terms of technology and usage strictly.

/By Order of the Chief Secretary/

**(S.VAITHIANADANE)
